

Step -1:-

Download Node from here <http://nodejs.org/>

Step -2:-

Install Node in its default location

Step -3:-

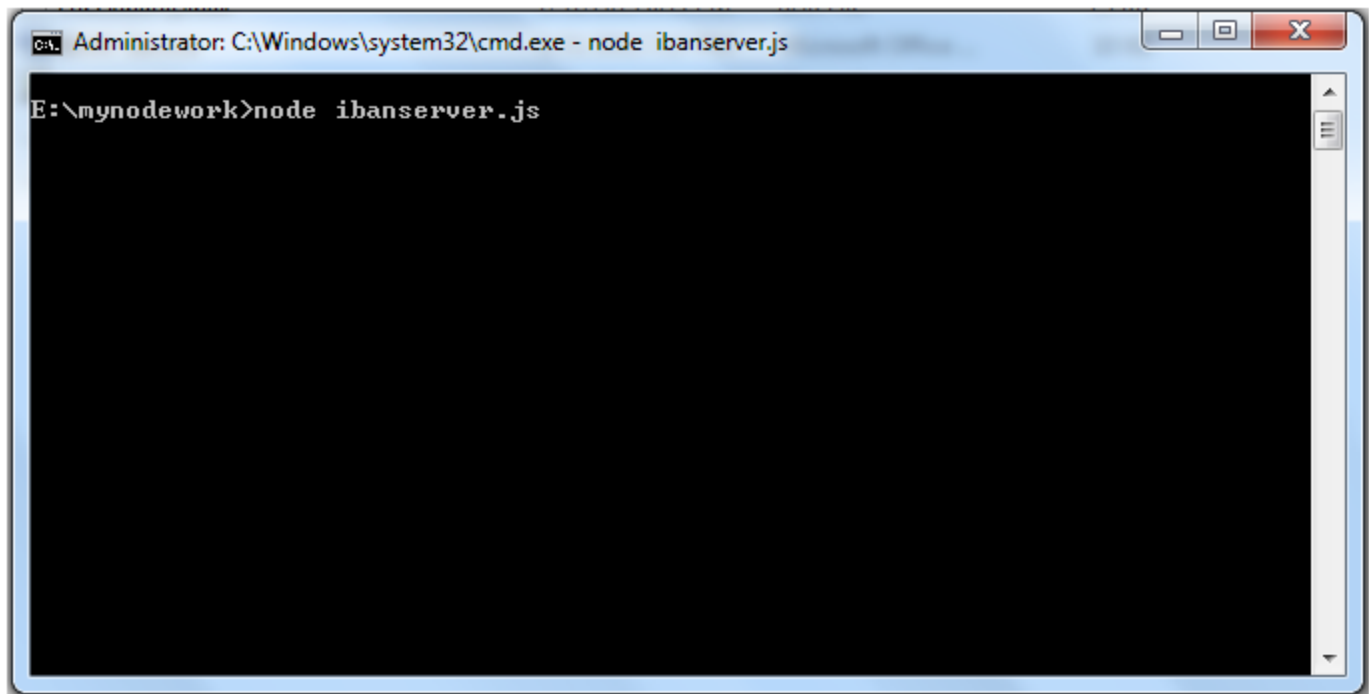

Download the source code .

<https://nodejsibanchek.codeplex.com/>

and extract to a directory . In my case the directory name is mynodework.

Step -4:-

Go to command prompt and navigate to the installed directory

The image shows a screenshot of a Windows command prompt window. The title bar reads "Administrator: C:\Windows\system32\cmd.exe - node ibanserver.js". The command prompt shows the current directory as "E:\mynodework" and the command "node ibanserver.js" has been entered. The output area is currently empty.

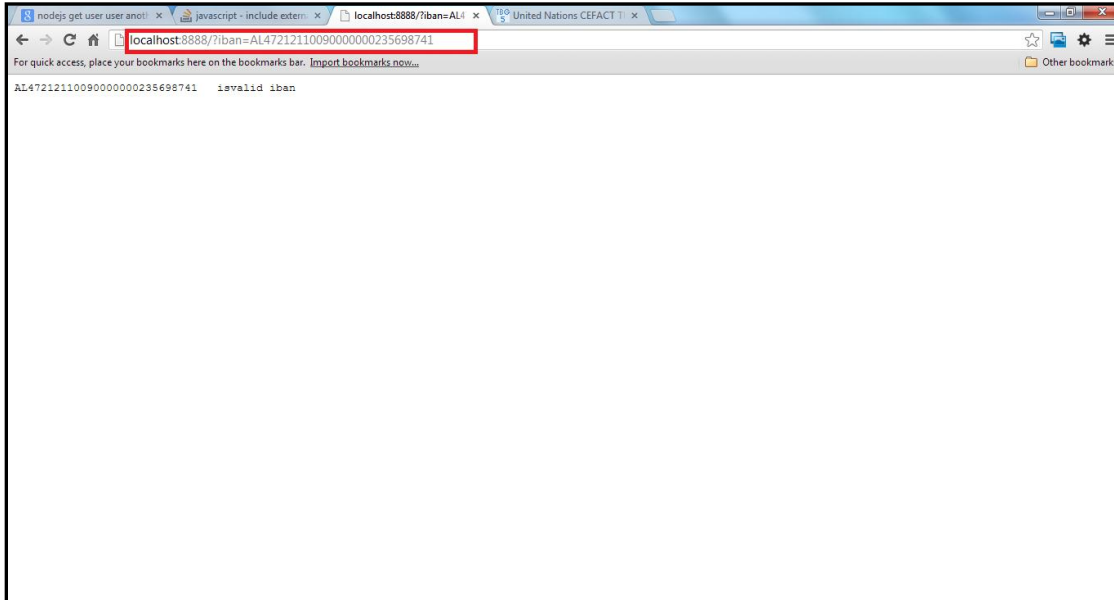

Step-5: If Node is installed correctly ibanserver will run with out errors.

Step – 6:-

Open the browser and paste the following

Example:

`http://localhost:8888/?iban=AL47212110090000000235698741`

How to use it in C#:-

Use `HTTPWebRequest` class

How to Host in IIS:-

I have not tested this.

Scott has written good article on hosting Node in IIS.

Please follow the instructions.
